## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 31 to 34 are rejected under 35 U.S.C. 102(b) as being anticipated by Okamoto (U.S. Pat. 4,910,578).

Okamoto teaches in Fig. 4D an interconnect comprising a composite structure comprising a first metal silicide 4, a second metal silicide 8, and an intermetallic compound 10 comprising metal from the first metal silicide and metal from the second metal silicide; wherein the first metal silicide may comprise titanium silicide (col. 4, l. 43) and the second metal silicide may comprise tungsten silicide (col. 6, l. 49-51), and the intermetallic compound 10 comprises titanium tungsten (TiW) (col. 6, l. 64-66).

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 35 to 40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Okamoto (U.S. Pat. 4,910,578) in view of Shepard (U.S. Pat. 5,227,333).

Okamoto teaches in Fig. 4D an interconnect comprising a composite structure comprising a first metal silicide 4, a second metal silicide 8, and an intermetallic compound 10 comprising metal from the first metal silicide and metal from the second metal silicide; wherein the first metal silicide may comprise titanium silicide (col. 4, l. 43) and the second metal silicide may comprise tungsten silicide (col. 6, l. 49-51), and the intermetallic compound 10 comprises titanium tungsten (TiW) (col. 6, l. 64-66).

Okamoto teaches the claimed invention with the exception of showing a field effect transistor having a source, a drain and a gate, formed in the semiconductor layer.

However, Shepard shows a local interconnect for connecting source, drain or gate of a field effect transistor to another active area within a substrate assembly, the local interconnect comprises a composite structure that includes a plurality of metal silicide layers.

Therefore, it would have been obvious to one of ordinary skill in the art to connect a source, drain or gate to another area within a substrate assembly as taught by Shepard with an interconnect with a composite structure as the one taught by Okamoto in order to obtain a reliable interconnect that provides a good electrical contact to silicon and does not further react with the device contact region.

Furthermore, memory arrays are well known to be LSI circuits as discussed in Okamoto.

***Response to Arguments***

1. Applicant's arguments filed 11/6/02 have been fully considered but they are not persuasive.

Applicant's argument regarding the feature of the intermetallic compound containing no non-metallic material has been noted, it has also been noted that Okamoto et al. as applied above teaches an intermetallic compound of TiW that contains metal from the first metal silicide (titanium) and metal from the second metal silicide (tungsten), thus applicant's invention is anticipated and no non-metallic materials are contained in the intermetallic compound.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ginette Peralta whose telephone number is (703) 305-7722. The examiner can normally be reached on Monday to Friday 8:00 AM-4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wael Fahmy can be reached on (703) 308-4918. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7722 for regular communications and (703) 308-7724 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
